Awery is a software development company and IT service provider **established in 2009** and serving clients all over the world.

Having a **comprehensive experience** in the aviation industry Awery provides unique aviation concept and solutions.

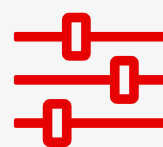

IMPLEMENTATION PROCESS

Awery Products have been developed in close cooperation with aviation and logistics companies to reflect up-to-date market demands and offer tailored complete business cycle solutions

Awery Team delivers full product support to the customers at every stage.

Awery Flexibility - each business is unique, therefore, Awery platform allows to change the interface and functionality according to your business processes.

Awery Functionality - support of the whole business workflow including finances.

Can be used by companies of any size - from 1-3 people team to market leaders with a network of branches/offices and international team.

Aviation business executives manage a large amount of complex data on a daily basis in order to employ and control their resources as well as serve their customers efficiently.

Awery ERP covers A to Z processes in the company, integrates operational and financial data. Being very flexible and customizable to the clients' requirements and business processes, it provides an advanced access control and messaging/email integration with templates support. Awery platform is a native web-based aviation solution with a comprehensive interface, training and use.

Awery ERP provides all the required tools, reminders, templates and reports in one place to integrate business and financial operations across various departments, cover the entire workflow and supply a multifunctional platform for day-to-day business activities.

Customizable Web-based platform for aviation business processes automation

- Manages sales, operations, finance and HR
- Increases productivity, reliability and efficiency
- Artificial Intelligence for tasks automation
- Multiple integrations to 3rd party services and API

Awery ERP helps aviation businesses

- Improve and automate business processes, visibility & performance
- Reduce the risk of error and human intervention
- Simplify decision making
- Enhance control and efficiency
- Save time and efforts
- Boost profitability

Key features

- Real-time transparent information flow
- Customer service tools (request and track flights, shipments, services progress, etc.)
- Flexible connectivity to other systems for data exchange
- Multi-Company (branches)/Multi-Currency support
- Bank-grade security with advanced access policies
- Blazingly fast performance
- User-friendly interface
- Mobile apps

System provides

- A real-time view of core business processes accessible worldwide
- Up-to-date management reports and data for analysis, automation of processes and document flow
- Powerful CRM, informational database, source for tactical and strategic planning
- Integrated mailing/messaging system with advanced templates support

Flight Operations

A flight operations module helps to plan routes, create flight schedules, follow up on flights. An essential tool in day-to-day operations used to control the movement of aircraft, flight service arrangements, crew eligibility and aircraft availability as well as to manage passengers, cargo load and crew details. Helps to follow up on the requested services' statuses with suppliers applying auto messaging option based on customizable templates. Contains full information for each flight sector including crew, passengers, baggage and cargo details. The advanced option shows and helps to manage empty leg flights improving company's logistics.

- Flights database with advanced filters and reports.
- Charter and scheduled flights planning, creation, follow-ups.
- Interactive Timeline Flights view.
- Routing services control with request templates support.
- Flight briefings, cargo manifests and general declarations, automatic weather and NOTAMs update reports.
- Advanced flight logs processing.
- Revenue and costs control with a direct link to accounting.
- Import of Flight Schedules from external sources in SSIM and other formats.
- Integrations:
 - Flight planning software to get ATC route, flight time, fuel requirements and list of overflying countries.
 - Weather and NOTAMs for flight airports.
 - Flight Movement Status (departure/arrival).
 - SMS notifications.
 - Innovata Global Flight Schedules.
 - Import and export of flight schedules in SSIM format.
 - APIS Export support for several countries.
 - Awery Mailtool - automatically links all the correspondence based on the Trip ID.

Fleet Management

Designed to control and manage company's or clients' fleet, track flight details, organize proper aircraft planning and utilization. Helps to synchronize work with both owned and leased aircraft, schedule and track maintenance, follow up on expired documents, generate utilization and performance reports.

- Aircraft and aircraft types database with full technical details.
- Fleet specifications, photo galleries.
- Documents control with notifications.
- The maintenance schedule, MEL resources tracking.
- ACMI rates and charges database for different locations.
- Advanced customizable reporting based on flight logs.

Fuel Pricing Management

- Dynamic price calculation per day.
- Platts and fuel currency rates database.
- Offers and price list generation for customers.
- Files and correspondence attachments to prices.
- Internal and external notes, remarks for supplier per airport, fuel information per country.

Crew Control

A module for managing crews of any size. Allows flight crew scheduling according to documents and training validity, flight duty time limitation regulations, availability, standby scheduling, vacations, days off and other restrictions.

- Crew rostering, scheduling and assignment to duties and flights.
- Flight Duty Time and Flight Time Limitations (FDTL) Control.
- Crew salary, bonuses, additional payments, and expenses.
- Documents, trainings and vacations management.
- Advanced reporting.

Aviation Services Customer Portal

A full-featured module for processing service requests with integrated accounting. The module helps to consolidate all customer requests, prepare quotations, segregate work on services by teams, offices, types and statuses; organizes and tracks services delivery, the accuracy of invoicing, purchases follow-up; manages rates database; improves messaging and reporting procedures. Designed to cover all processes from initial query to the execution and final payment.

- Automated flight services requests control.
- Services requests processing and management: fuelling, handling, permits, flight plans, etc.
- Preferred vendors management based on priority, service type, customer requests, flight category and country/location.
- Sale and cost rates database for services.
- Revenue and costs calculation, accounting processing/allocation.
- Automated messages generation based on Text, HTML and SITA templates.
- Web and mobile service status tracking/request application for the customers.

External Tools

Crew Portal

Allows all crew members to access and manage their own flight schedules, check compliance with flight and duty limitations, track days off, documentation and training validity.

- Personal crew member login.
- Checking, confirming or refusing upcoming flights.
- Checking flight details and documentation (brief, flight plan, crew general declaration, manifest, weather, and notams).
- Standby and days off schedule.
- Vacations requests and their status updates.
- Alerts on expiring documents and trainings.
- Checking compliance with flights and duty limitations.
- Submitting comments and attachments.
- Inputting and attaching flight log data.
- Link to Awery Documents Library to view all assigned documents.
- Android and iOS app.

Aviation Services Management

A web-tool for aviation services providers to deliver real-time updates to their client on requested services, submit new services requests, review fuel rates, generate flight briefs, etc.

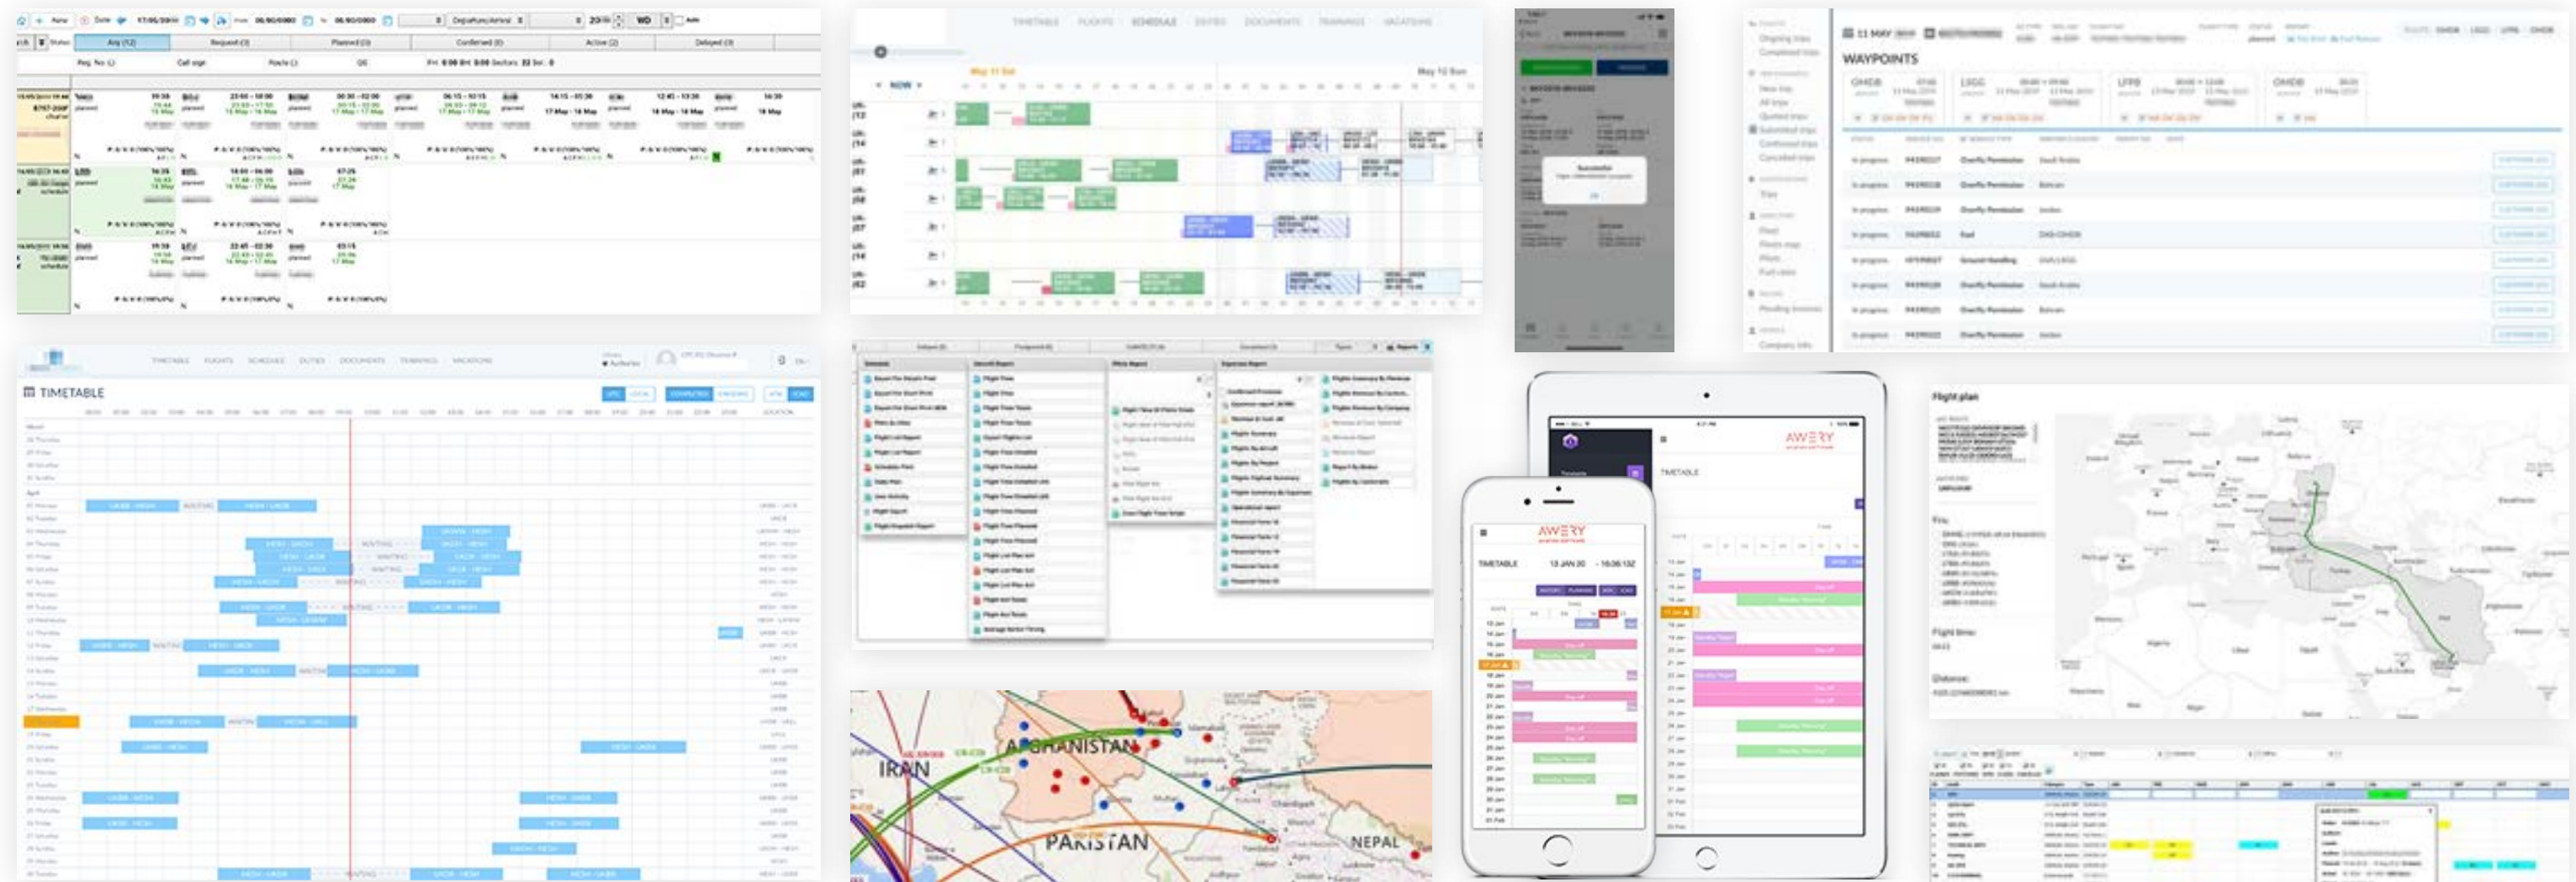

- List of ongoing/completed trips services details with current statuses.
- Services changelog.
- Brief, fuel release and other documents generation.
- Ability to request new services with an instant quote based on customers' rate: fuel, permits, handling.
- Link to flight planning systems to generate flight ATC route and list of overflying countries permits requirements.
- Customers' assigned fuel rates list.
- Editable customers' fleet and pilots' details with documents upload.
- Customer company details setup.
- Multiple users list per client.
- Client Branded Android and iOS apps.

Flight Status Live Update

- Direct integration to the customer's website.
- Customization to customer's corporate design.
- Immediate schedule update.

Compliance & Audits

- Internal/external compliance and safety audit schedule.
- Interactive audits calendar.
- Audits progress tracking.
- Audits findings control with advanced filters.
- Audits closing and reporting.
- Documentation and files attachments to audits and findings.

Cargo Modules

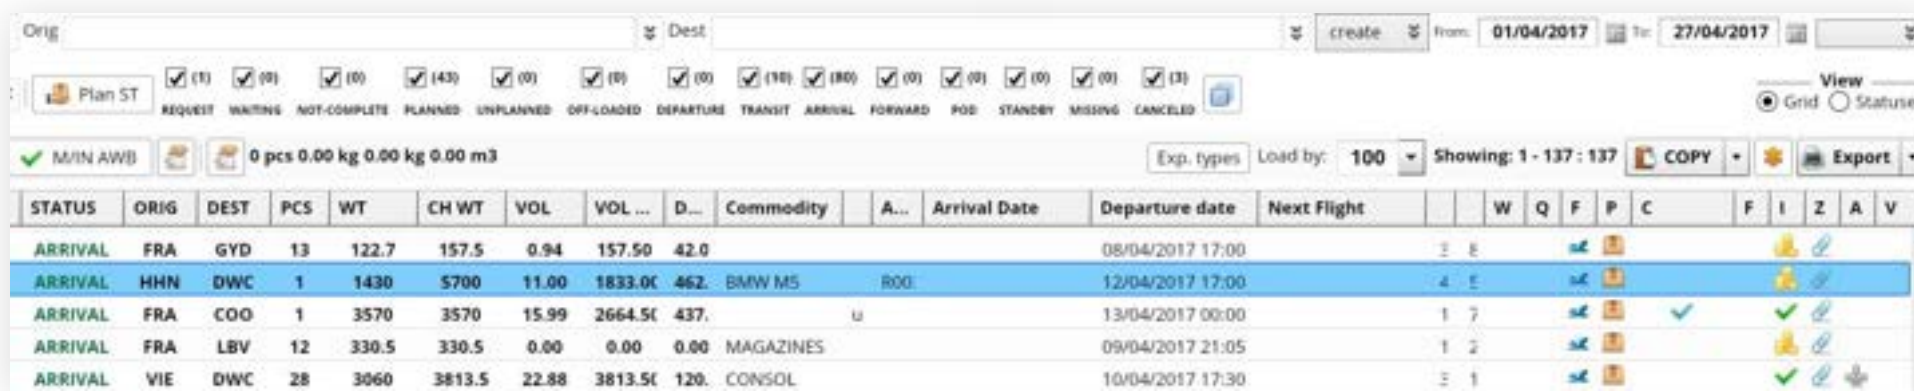

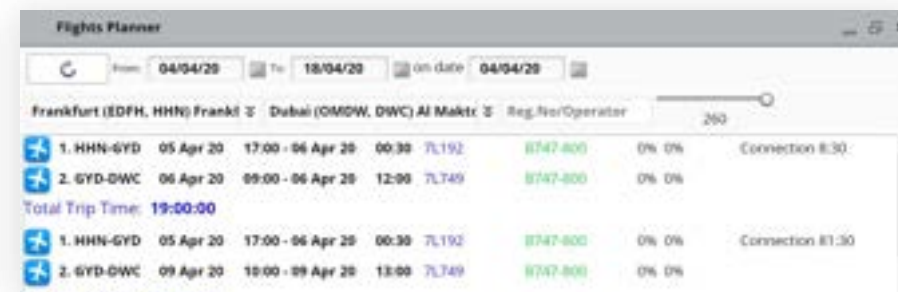

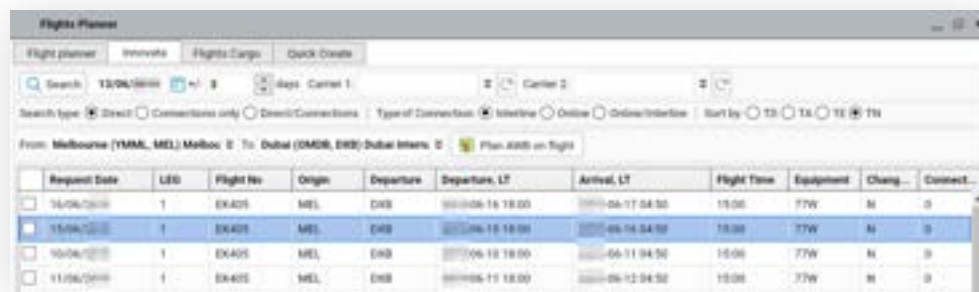

Cargo Management

Designed to cover the entire cargo management process. Helps to manage and plan cargo for flights, significantly improves customer service by tracking shipments statuses, providing flight details and movement updates, keeping customers informed about space available on future flights. Processes AWBs, load plans, barcode labels, etc.

- Shipments database with advanced filters and statuses.
- Full AWB and HAWB Capture: issue and verify AWB, update and send FWB/FHL messages.
- Import of AWBs from XLS files or FWB/FHL message.
- Cargo restrictions control based on commodity, origin/destination and shipment routing.
- Part-shipment support – multiple flights per each package.
- Cargo planning on flights/truck trips: flight planner with up to 3 connections optimization, innovata global flight schedules search, quick flight creation.
- Automatic chargeable weight calculation based on pieces dimensions.
- Automated Track and Trace based on Flight Movements updates, FlightStats.com and FSU updates by Sita.
- AWB Attachments – uploading or emailing (with auto AWB assignment) files to specified shipments.
- Mailtool - Incoming messages auto-linking with AWB from sales/operations emails or SITA.
- Shipment Booking confirmation to the clients by email.
- AWB IATA printing formats – Neutral and for Dot-Matrix Printers.
- Packages labels printing with QR/Barcodes.

- Fully support incoming and outgoing messages e-AWB by SITA, or email for a link to 3rd party systems: FFR, FFA, FSU, FHL, FWB, etc.
- Option to link customs API for import and export cargo (will depend on country requirements and available API).
- AWB Stock control:
 - AWB Stock control with distribution to Office, Team, Customer/Agent.
 - Automatic agent commission generation based on the type of charges applied.
 - AWB Stock usage reports.
 - Emailing Customers with assigned stock allocation.
- Cargo Rate Sheets:
 - Rates database - advanced Rates control (buy/sell/both) based on multiple origins, destinations, commodity types, per kg/lbs and ULD (AKE/PMC) rates, dates validity, auto surcharges based on multiple rules, etc.
 - General, Promo, Agent (Customer groups and customer specific) rates and surcharges
 - Complex rates based on routing (per sector rates) for revenue and cost with interline changes support
 - Linking Surcharges to rates with advanced filtering (origins, destinations, type of cargo)
 - Managing products, commodity types, type of charges for AWB revenue and cost.
 - Cloning of rate sheets with bulk markup/discount.
 - Copy – Paste rates from Excel sheets, export rate sheets to Excel.
- Shipments Locations view/report - shipments by departure or arrival locations on selected dates.
- Shipments Profit view/report: Detailed reports and statistics/ diagrams of estimated vs actual revenue/cost/profitability with cross currency conversion.
- Warehouse Cargo Inventory view and reports:

- List of Warehouses linked to airports and Ground Handling Agents.
- Android/iOS apps for Warehouse control - QR/Barcode reader to update warehouse status – in/out/check, shipment statuses, ability to take and attach pictures of the cargo, check flight details and review weight/dimensions, process POD, etc.
- Multi-office, multi-team, multi-currency operations.
- Sales invoice, CASS invoice, CASS Export - advanced quick invoicing for Customers, Agents, GHAs:
- Invoice from AWB details or from AWB list with multiple AWBs per invoices option.
- Batch invoicing from AWB list or Cargo on the Flight.
- Invoice to display shipment and flight details from AWB dynamically.
- Different invoice formats per kind of service.
- Generic invoice for other/additional services.
- Ability to link online payments gateway as link and QR code on invoices for direct payments.
- Email invoices from the system.
- Full AWB Accounting processing - revenue and costs control: per shipment and flight, AWB profit calculation (estimated and actual) with advanced reporting.
- Customizable to Customer Requirement Dynamic Reports:
- Sales reports based on multiple filters: by customer, by commodity, by service, etc.
- Flight Manifest/Flight Load Plan/Flight Priority report.
- Commission report.
- AWB Stock report.
- Cargo in warehouse.
- Net Revenue/Profitability reports and statistics.

Cargo Quotes Tool

- Quotes database with advanced filters and statuses.
- Cargo Quotes processing with auto rates based on a selected product/commodity.
- Creation of quotes from incoming emails and cargo bookings from quotes.
- Sending offers to the client with quote details and links to accept/refuse quote.
- Converting Cargo quote to AWB Booking with full data copy from the quotation.
- Full correspondence history and reporting.

ULD Contol

A module helps to control entire company ULD stock, track their movements history and current location.

- ULD stock management.
- ULD planning on flights with shipments allocation.
- Proactive monitoring and real-time system alerts.
- Visibility of your airline's entire ULD inventory.
- Transfer handling, Stock check, repair control, condition updates.
- Pallets availability at multiple locations.
- ULD reports, ULD SITA messaging.
- ULD Stickers, Android/iOS app for inventory updates.

External Tools

Cargo Reservation

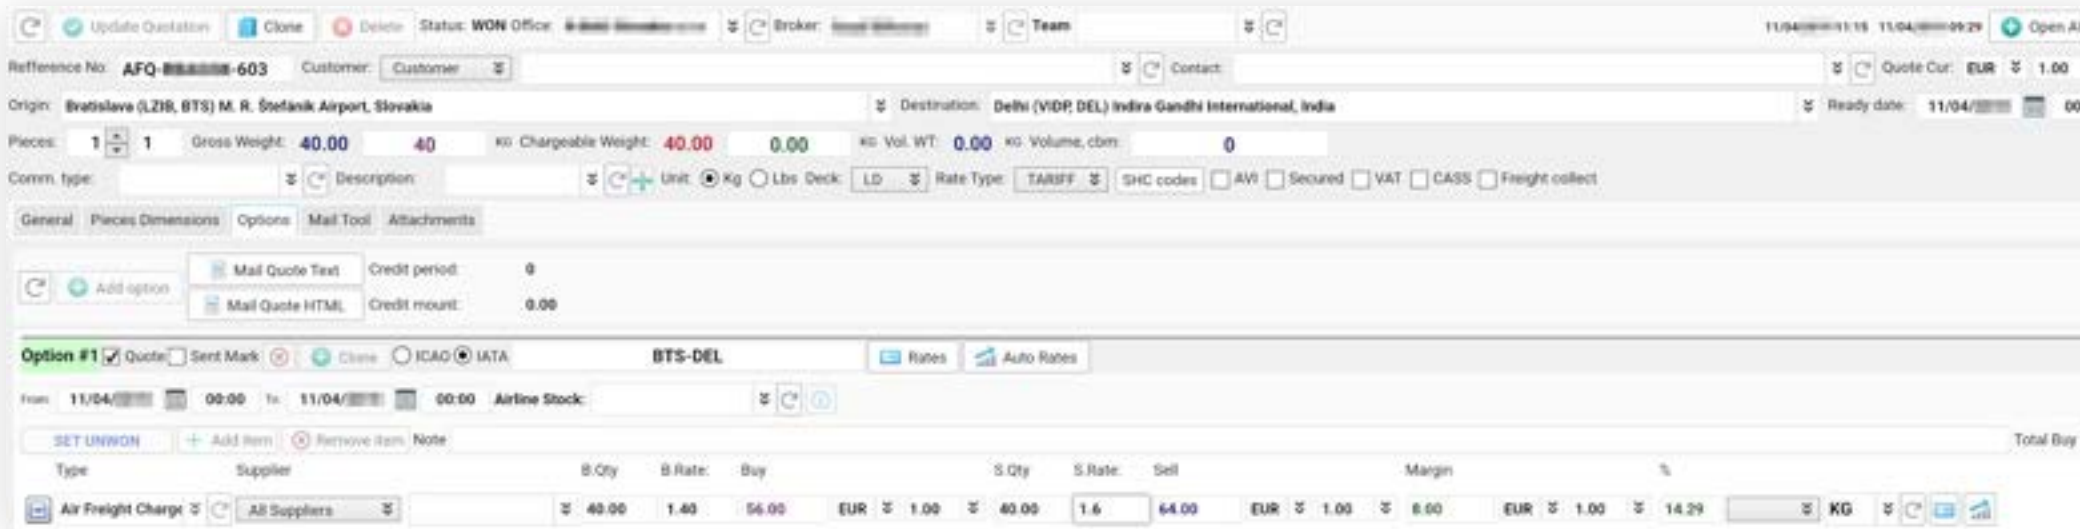

A full-featured online cargo booking engine. Plugs into the customer's website and provides fast and user-friendly direct cargo bookings and quotations to agents and customers.

- Full Online booking engine with agent stock control.
- Planning cargo on flights.
- Track and trace with automated status updates and integration to website.
- iOS and Android mobile apps support push notifications.
- Possible integration with 3rd parties apps.
- Android and iOS app.

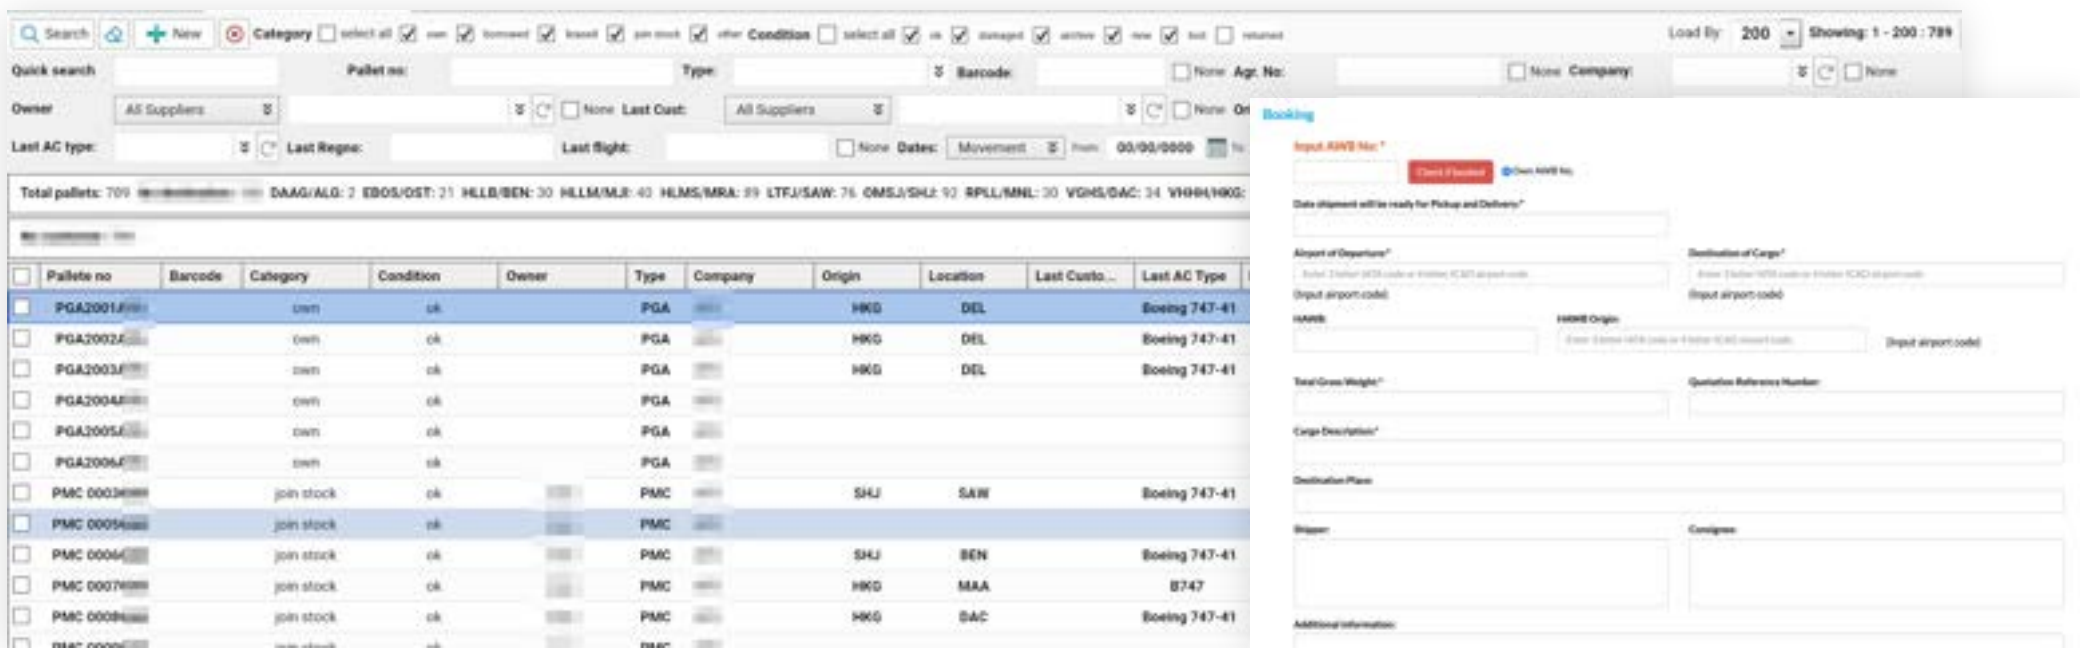

Cargo Track & Trace

A tool for tracking customer's shipments. Presented as a separate page on customer's website with a field to insert AWB number. Provides full information on AWB booking date, time, origin-destination, weight and pieces, flight details, movement details, delivery status.

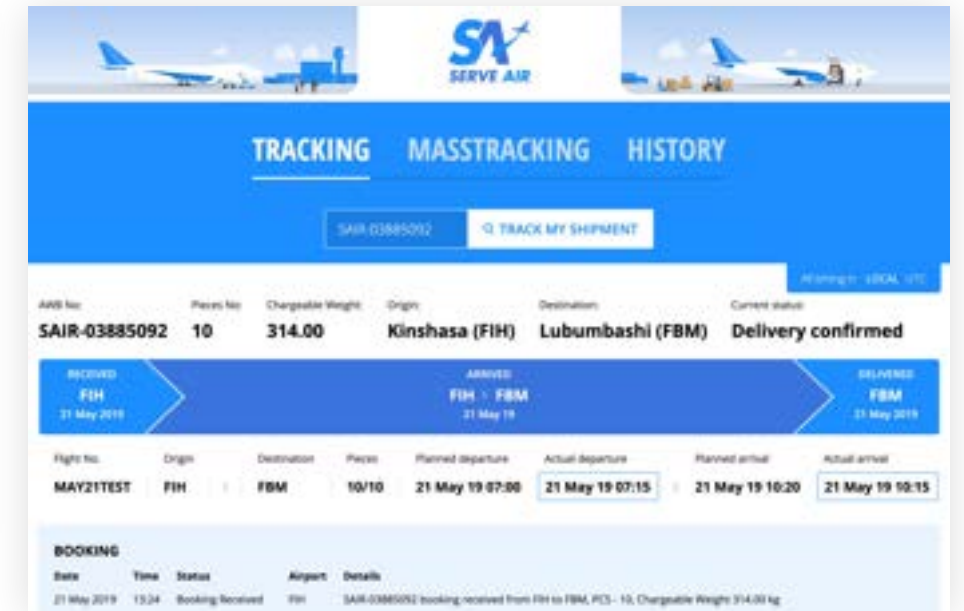

- Customization to customer's corporate design.
- AWB details.
- Easy shipments tracking.
- Full information on cargo movements.
- Graphical presentation of routing.
- Android and iOS app.

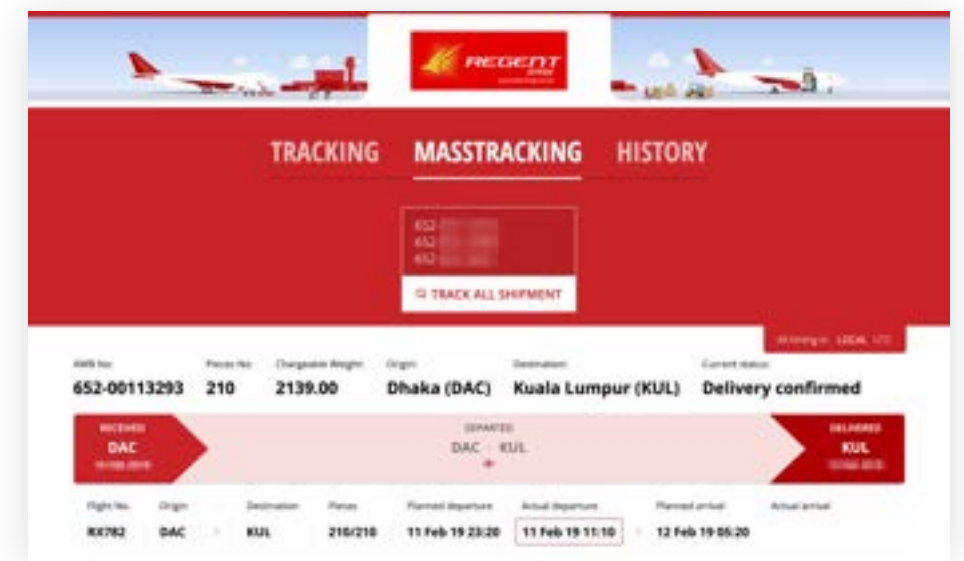

The screenshot shows a quote for reference AFQ-603. The origin is Bratislava (LZIB, BTS) M. R. Štefánik Airport, Slovakia, and the destination is Delhi (VIDP, DEL) Indira Gandhi International, India. The quote is for 1 piece with a gross weight of 40.00 kg and a chargeable weight of 40.00 kg. The rate is 56.00 EUR. The quote is valid from 11/04/2019 to 11/04/2019. The quote is for a Boeing 747-41.

The screenshot shows the ULD Contol interface. It displays a list of pallets with columns for Pallet no, Barcode, Category, Condition, Owner, Type, Company, Origin, Location, Last Cust..., and Last AC Type. The list includes pallets like PGA2001A, PGA2002A, PGA2003A, PGA2004A, PGA2005A, PGA2006A, PMC 0003A, PMC 0004A, PMC 0005A, PMC 0006A, PMC 0007A, PMC 0008A, and PMC 0009A. There is also a booking form with fields for Input AWB No., Date shipment will be ready for Pickup and Delivery, Airport of Departure, Destination of Cargo, Total Gross Weight, Destination Place, Shipper, and Consignee.

The screenshot shows the Cargo Track & Trace interface for AWB No. SAIR-03885092. The origin is Kinshasa (FIH) and the destination is Lubumbashi (FBM). The current status is Delivery confirmed. The tracking history shows the shipment was received at FIH on 21 May 2019, departed for FBM on 21 May 2019 at 19:07:00, and arrived at FBM on 21 May 2019 at 19:10:15. The booking details show the booking was received from FIH to FBM on 21 May 2019 at 13:24.

The screenshot shows the Cargo Track & Trace interface for AWB No. 652-00113293. The origin is Dhaka (DAC) and the destination is Kuala Lumpur (KUL). The current status is Delivery confirmed. The tracking history shows the shipment was received at DAC on 11 Feb 2019, departed for KUL on 11 Feb 2019 at 23:20, and arrived at KUL on 12 Feb 2019 at 19:05:20. The booking details show the booking was received from DAC to KUL on 11 Feb 2019 at 11:10.

Charter Brokerage Modules

Charter Quotes

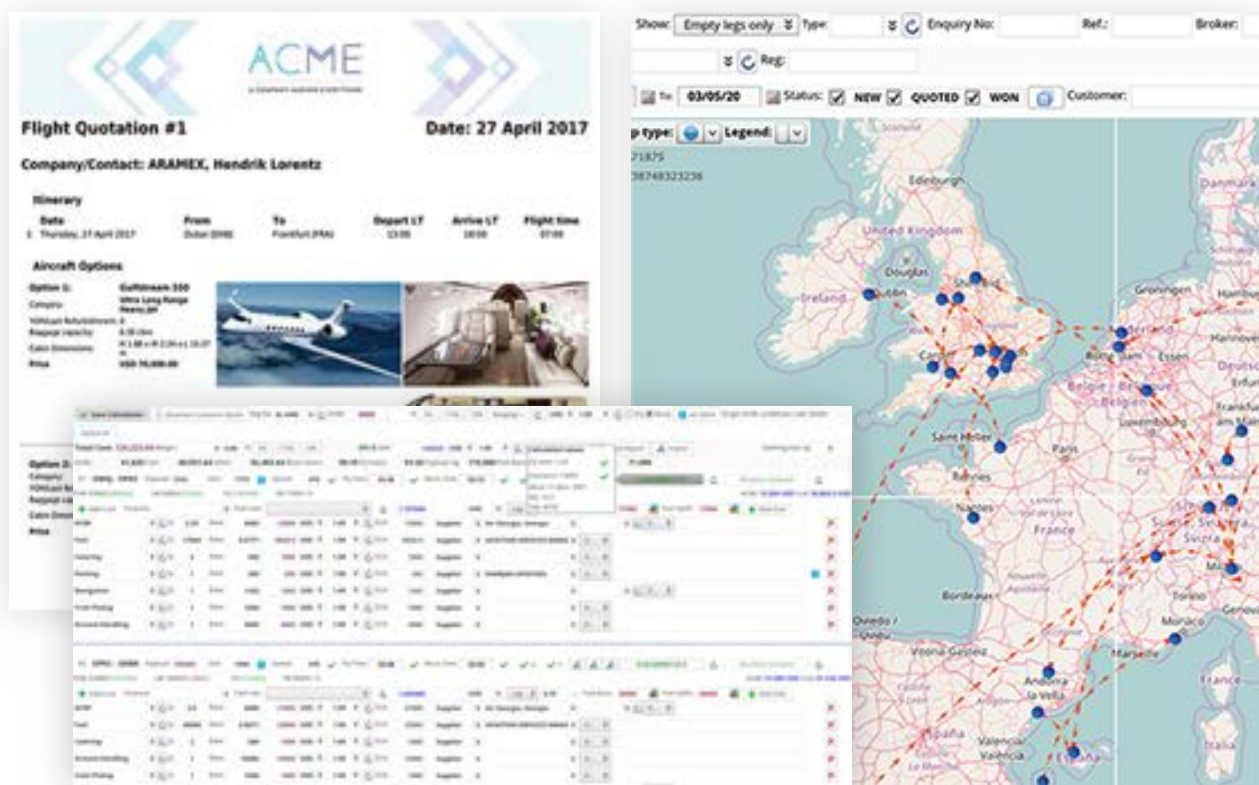

- Automated process to speed up input of enquiries, send requests to operators, quote customers, make flight briefing, generate charter agreements, summary reports, etc.
- Segregated filterable database of enquiries.
- Advanced support databases: operators, fleet, aircraft types, airports, countries, etc.
- CRM features: customers/suppliers with contact details, requests, activities, tasks and messaging history.
- Automated message generation to send requests to operators.
- Response from operators: schedule details, charter price details, additional services price details.
- Response from customers: won, lost with reason, fixture details, fixture schedule, fixture reference number.
- Empty legs enquiries management, operator's empty legs connectivity through API.
- Interactive world map with combined data from enquiries database and empty legs with analytics.
- Charter calculation for cost calculation per sector using either rates database or previous quotes.

Charter Calculation Tool

- Filterable quotes/calculations database.
- Connection to flight planning software for precise route data, such as flight time, fuel consumption, navigation charges based on aircraft type and weather.
- Advanced rates management for all types of costs.
- Instant converting of estimations into commercial offers.

Empty Legs Control

- Advanced analytical search to match enquiries/flights with empty legs.
- Unique empty legs numbers, statuses, sources, availability dates.
- On-map representation of empty legs combined with flights and enquiries.
- Linking to existing enquires/flights.
- Live database with the option to post empty legs to the website or distribute by emails.
- Automatic alerts on available empty legs.

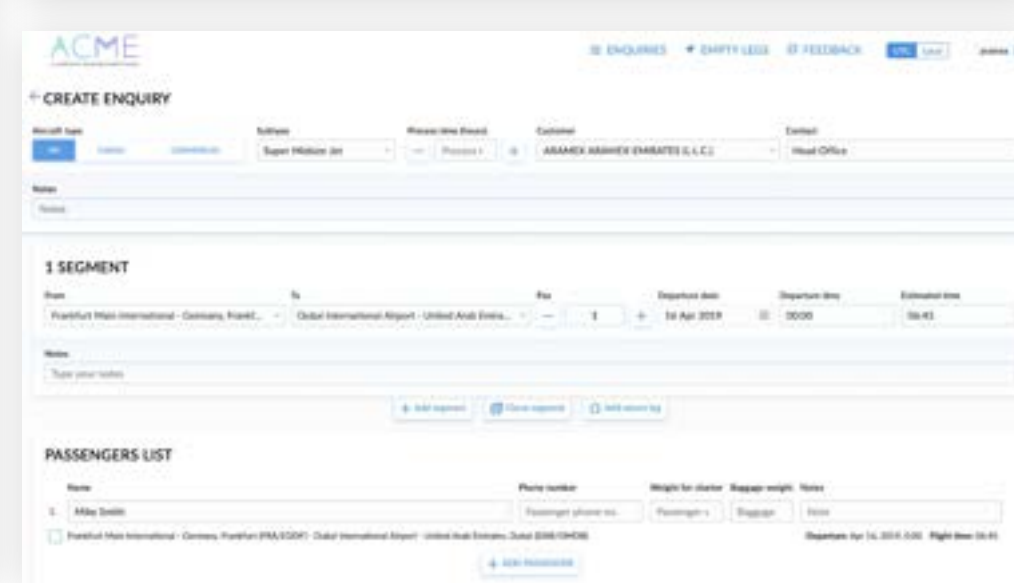

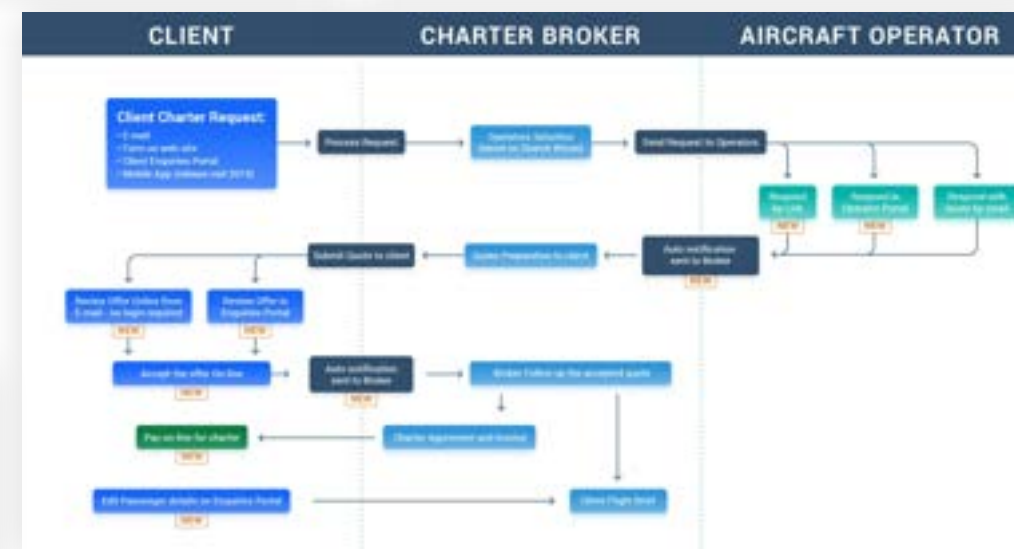

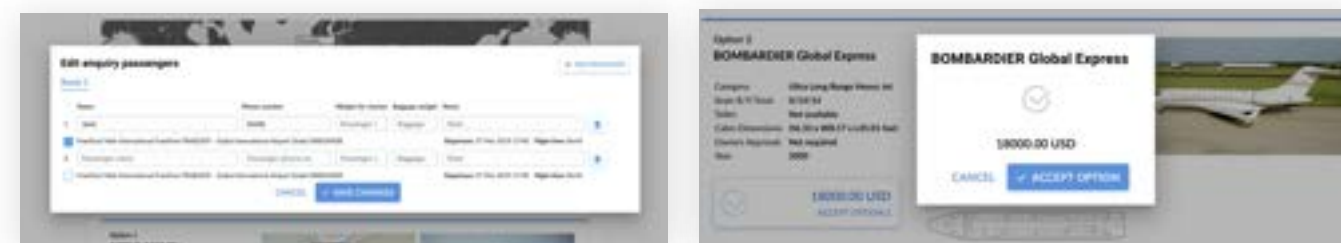

External Tools

Charter Quotes Customer Portal

Awery ERP online tools for charter brokers help to simplify and speed up communications with operators and clients, allow to automate and make a lot of steps in charter brokerage digitally, making it more convenient for clients and operators:

- Dedicated Client Enquiries portal allows to create, review and accept quotes requests, edit passenger details, generate brief and pay online for a charter.
- Option for Client to review the quote and accept the quote by link (no login required).
- Dedicated Operator portal allows to review and submit quotes, update fleet details and documents - to match with compliance requirements.
- Option for the operators to submit prices on quotes by links from request email (no login required).
- Links are mobile friendly and can be opened on any device/browser.

Contractors management modules and tools

CRM

A module for processing airline customers' and supplier' business data with a full history of related activities/operations. Helps to identify, categorize, target, track customers and have proper public relations. Provides company's customers with fast and reliable communication channels, speeds up and automates services to improve the overall customer's experience.

- Customers/suppliers/leads management with multiple contacts, types, statuses, extra fields management.
- Activities control and linked tasks history, documents upload.
- Credit terms.
- History of operations, accounting integration, reporting.

Info & Rates Database

Provides structured data with advanced filters.

- Aircraft Types: VIP, Commercial, Cargo, Rotary Wings; categories, full data (MTOW, cabin dimensions, facilities, speed), photo gallery, list of aircraft.
- Airports: longitude, latitude, time zone, runway details, tarmac details, terminals details, procedures, restrictions, permissions.
- Countries: region, sanctions, list of airports.
- Distances: flight distance, entry points, weather codes, NOTAMS, flight/block time for reporting.
- Contacts: all companies' contacts grouped by contractor or company, extended search.
- Rates: currency rates, customer-specific rates, service rates, shipping rates, fuel rates, fixed expenses for airports, flight cost center, etc.
- Other data selectors editing: variable pick lists, services, revenue, expense types, etc.

Mail Link Tool

Allows importing user mailboxes to Awery database with threads segregation and advanced filtering. Serves as a messaging platform where emails are linked to operational data (quotes, customers, suppliers, flights, AWB, etc.) and correspondence history is stored. Designed as a tool to replace the desktop mail applications.

- Mailbox import with attachments to Awery ERP.
- Messages database with statuses, labels and advanced filters.
- Messages auto-linking to threads, customers, quotes, tasks, activities, flights, services, AWBs.
- Messages history in customer/supplier profiles.

Accounting & Finance

Awery ERP provides necessary tools for managerial and financial reporting, deeply integrated into operational processes, allows detailed tracking, reporting and analysis of financial transactions. Helps to reduce the cost of accounting and improve financial decision making by giving up-to-date reports and automated accounting procedures. Is compliant with generally accepted accounting principles (US GAAP).

- All standard accounting and financial functions with advanced reporting.
- GAAP compliant full-featured solution for accounting management.
- Custom COA, multi-branch, multi-currency and taxation transactions support.
- Deep integration of finance and operational/sales data.
- Cost and revenue allocation.
- Receivables and payables control.
- Bank and cash, credit and debit notes, journal vouchers management.
- Fixed assets and prepayments control.
- Trial Balance, Balance Sheet, Profit and Loss, Cash Flow and other reports.

Human Resources

A module helps to increase HR management efficiency by organizing the company's functions and responsibilities. Allows employees' documents processing, recruiting and training handling, salary and bonuses management, staff performance reviews and analysis, etc.

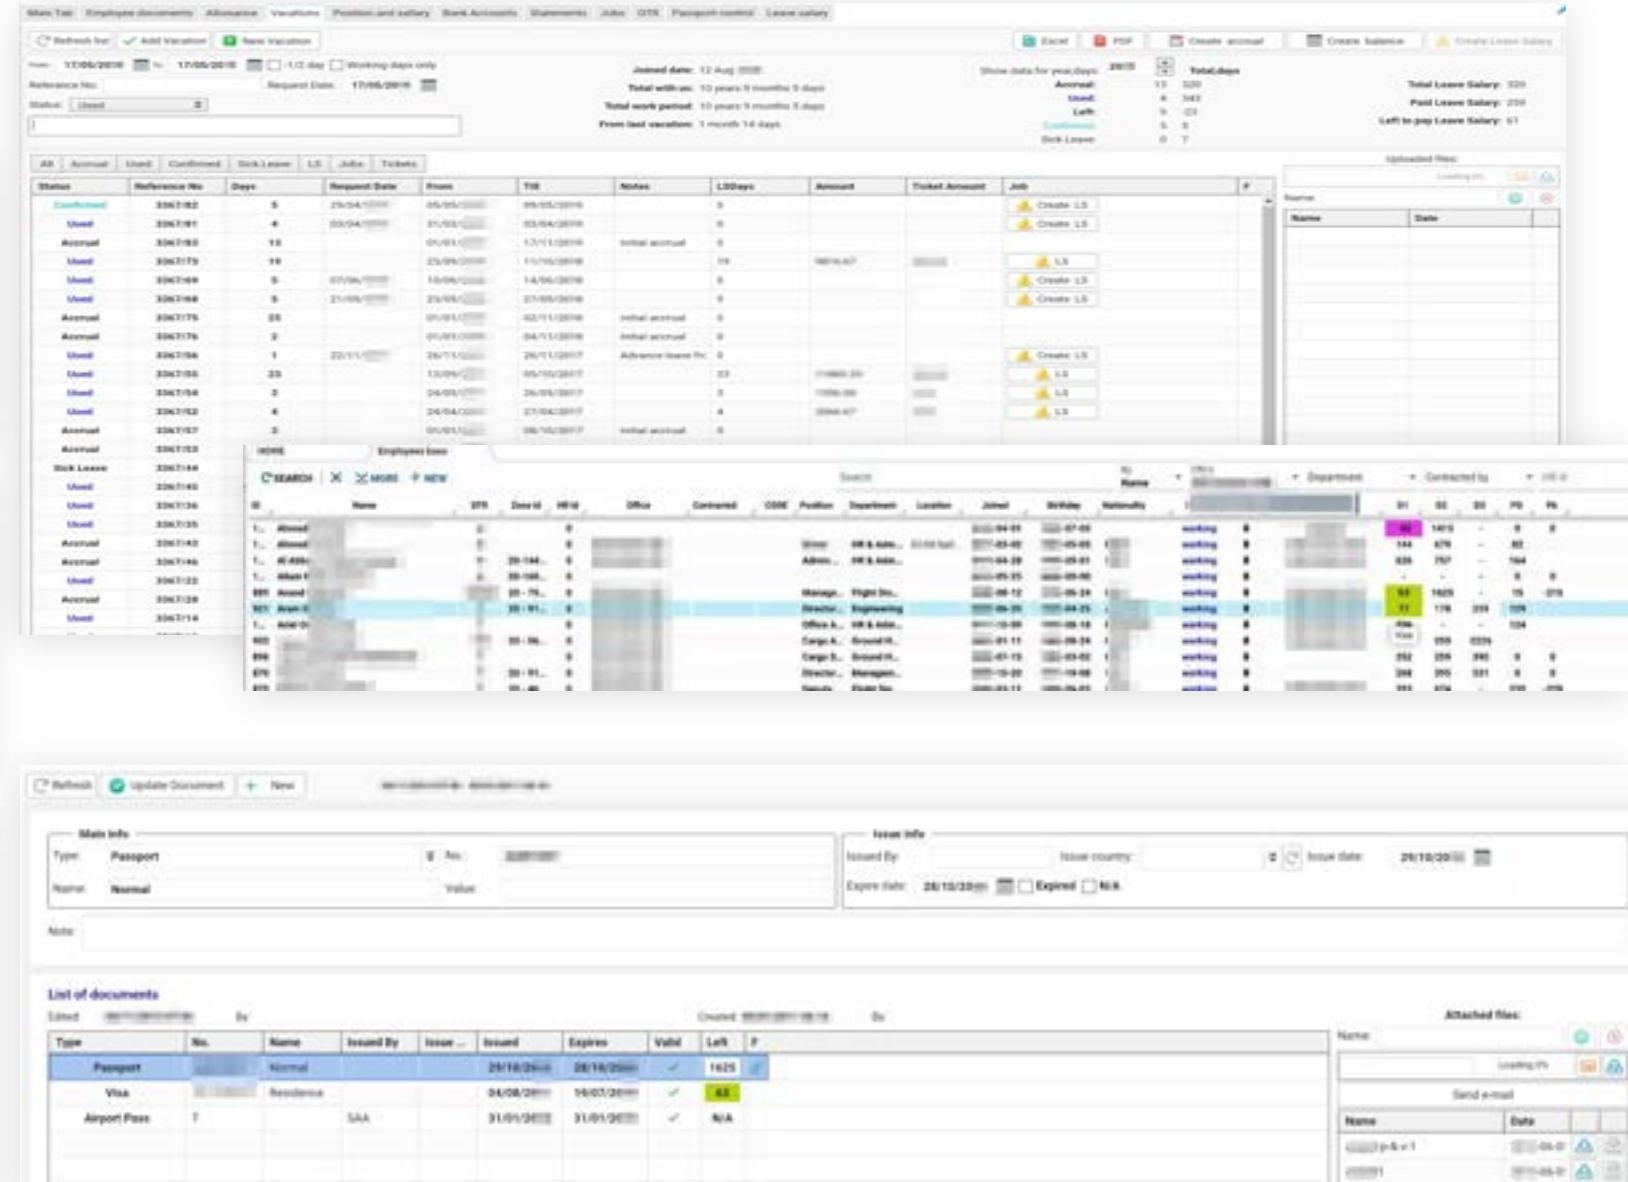

- Staff database with contact details.
- Documents control with expiry notifications.
- Vacations control.
- Allowances/loans/advances management.
- Positions and salaries history.
- Payroll processing and payslip generation.
- Work time attendance control.
- Birthdays and other notifications.

Inventory Control

Full process for managing inventory:

- Products catalog with a hierarchical structure, images gallery, purchase units, min stock/reorder levels, multiple suppliers and their prices.
- Inventory Requests, Products Purchase Orders with Purchase Invoice allocation, Goods Receipt Notes, Goods Release Notes, Goods Internal Transfers, Disposal of the items.
- Products movement history and availability.
- Inventory reports with multiple filters by location, type of products, product categories, etc.

Cloud-based aviation documents distribution and control solution

Awery Documents Library allows to automate processes related to the documents distribution, their revision and approval control, producing distribution status reports.

Benefits you will get

- A unified and easily managed database for documents storing and distribution.
- Covering compliance requirements for documents distribution within the aviation company.
- Transparent document flow within the company.
- Bank-grade security of documents with advanced access policies.
- Mobile apps for Android and iOS.
- Multi-language support.

Key Features

- Creating a framework for documents, their revisions and distribution among the concerned parties.
- Document classification by categories, authors, storage places, etc.
- Handy distribution lists based on departments and positions.
- Tools for document access management, signature status control.
